Wyatt's Lawn Grass Seed

A smooth green lawn is your home's greatest beauty asset. Deep, thorough preparation, proper fertilization and good seeds are the most important steps toward a successful lawn. Read what we have to say on page 1 (opposite), "How to Make a Beautiful Lawn", then select the mixture offered below, most suited to your needs. The results will please you.

Wyatt's Carolina LAWN GRASS MIXTURE

F-60. WYATT'S CAROLINA mixture of lawn grass seeds is an improvement on all of the better mixtures offered heretofore, at comparative prices. Our constant experiments have taught us just what grasses are best suited to the Eastern and Southern states. The finest seeds of these varieties are carefully reselected and blended into our Carolina mixture so as to give the very best results obtainable. Sow 5 lbs. per 1,000 sq. ft. **Prices: Lb. 50c; 5 lbs. \$2.25; 10 lbs. \$4.00; 25 lbs. \$9.50; 100 lbs. or more at 36c per lb., prepaid.**

Wyatt's Colonial LAWN GRASS MIXTURE

F-58. WYATT'S COLONIAL MIXTURE. The continued demand for a mixture of the finer leaved grasses have led us to prepare this Colonial mixture consisting largely of the best varieties of bents and fescues. While the price per pound is higher, only a fraction of the quantity required of other grasses is required of the Colonial mixture, leaving very little if any difference in the total cost for seeding. Once the lawn is seeded to these grasses of vastly superior beauty, all other varieties will be discarded. Use 2 lbs. per 1,000 sq. ft. **Prices: Lb. \$1.25; 2 lbs. \$2.25; 5 lbs. \$5.25; 10 lbs. \$10.00; 25 lbs. or more at 95c per lb., prepaid.**

Wyatt's Sunny South LAWN GRASS MIXTURE

F-59. WYATT'S SUNNY SOUTH MIXTURE. For lighter soils and soils that become extremely dry, and in locations subjected to extreme heat during the summer months **Wyatt's Sunny South** mixture of lawn grasses is recommended. The grass varieties used on golf greens over the entire South predominate in this mixture. Only the purest stocks are used. Sow 5 lbs. per 1,000 sq. ft. **Prices: Lb. 50c; 5 lbs. \$2.25; 10 lbs. \$4.00; 25 lbs. \$9.50; 100 lbs. or more at 36c per lb., prepaid.**

Wyatt's Shady Nook LAWN GRASS MIXTURE

F-61 WYATT'S SHADY NOOK LAWN GRASS. A carefully blended mixture of grasses best adapted to shaded situations. Use 5 lbs. per 1,000 sq. ft. Where the soil is acid from poor drainage or drippings from trees, occasional application of agricultural lime should be made at the rate of 5 to 6 pounds per 100 sq. ft. **Prices: Lb. 50c; 5 lbs. \$2.25; 10 lbs. \$4.00; 25 lbs. \$9.50; 100 lbs. or more at 36c per lb., prepaid.**

LIME
Finely ground agricultural limestone. Use 10 lbs. per 100 sq. ft. to sweeten acid soils. 100 lb. bag 75c. Write for quantity prices.

PEAT MOSS
For new lawns 1 bale should be thoroughly pulverized and mixed in each 300 sq. ft. of lawn area. Nothing is so beneficial to establish lawns as a bale of peat mixed with 100 pounds of Sheep Manure applied to each 2,000 sq. ft. 3 or 4 times each summer. Peat should also be used liberally in gardens, flower beds and borders, and as a mulch for shrubbery, because of its capacity to hold 10 to 15 times its own weight in water. Price: Large bale (approximately 20 bu.), \$3.85.

A high grade plant food of Phosphoric Acid and Potash to supplement the nitrogen in manures, Cotton Seed Meal and other nitrogenous fertilizers. 100 lb. bags \$2.00.

ALUMINUM SULPHATE
Used 1 lb. to 25 sq. ft. make soils acid for acid loving plants. Mountain Laurel, Rhododendrons, Azaleas, etc. Prices: Lb. 25c; 5 lbs. \$1.00, postpaid. Not prepaid, lb. 15c; 2 lbs. 25c; 5 lbs. 60c; 10 lbs. \$1.00.

SLAG
Ground Basic Slag, while costing only slightly more than lime, is high in Phosphoric Acid in addition to its soil sweetening property. We highly recommend Slag for the building and maintenance of lawns especially for the various Blue grasses and clovers. Slag should be used liberally on all pasture, grain, lespedeza and clover lands. 100 lb. bag \$1.00. Ask for low ton and carlot delivered prices.

SHEEP MANURE
Best of all natural manures, highly concentrated, free from straw and rubbish, with all weed seeds killed. It puts new life into worn out soils. For lawns use 6 to 10 lbs. to every 100 square feet. For vegetable or flower gardens use 10 to 15 lbs. to every 100 square feet. Prices: 5 lbs. 35c; 10 lbs. 60c; 25 lbs. \$1.00; 50 lbs. \$1.50; 100 lbs. \$2.75; 500 lbs. \$13.00; Ton \$17.50.

TOBACCO DUST
Supplies organic potash and nitrogen. It will increase the value of any chemical fertilizer when used in equal parts. Price: 100 lb. bag \$2.50.

The first requisite for a lawn of any kind, be it permanent or merely temporary, is good soil. Good soil from a point of plant growth must have these three vital parts: Plant food, moisture, humus. Most of us are familiar with the first two of these but some of us are not so familiar with the third—humus. Humus is that part of an ideal soil that renders it porous and loamy. It prevents heavy soils from packing or baking and adds "body" to light or sandy soils, thereby increasing their moisture-holding capacity. Therefore, since plant foods must be in a liquid form before they are available to plants, humus is the most important of the three vital parts of an ideal soil. Heavy soils without humus are so tightly packed that they have no room for moisture. Loose sandy or light soils, while having great capacity for moisture, drain so rapidly that they become very dry too

often for healthy plant growth. And so we see then that humus added to heavy soil increases its capacity for moisture while preventing its packing or baking and when added to sandy or light soil increases its ability to retain moisture.

Wyatt's Peat Moss, listed on this page, is the finest type of humus available since it is perfectly pure, containing no weed seeds nor harmful bacteria and has a moisture capacity of 15 times its own weight. Where the area is too great to permit the use of commercial peat for humus we recommend successive plantings of cover crops for turning under, legumes much preferred. Humus derived in this manner has the advantage of being much higher in plant food content than commercial peat. A third source for humus is through the use of animal manures. We do not recommend manures unless they are known to be thoroughly rotted and free of weed seeds and harmful bacteria. As the humus diminishes it must be replaced from a compost heap made of leaves from trees

or grass clippings or from some equally generous source, and scratched into the lawn from time to time. However, once the soil is well built up with humus and a constant supply for the future is provided the problem of growing a permanent lawn is solved.

After the soil has been thoroughly broken apply 4 lbs. of Vigoro per 100 sq. ft. Prepare a fine seed bed and allow to settle. The seeds may be sown, on the scarified surface, using 1 pound to each 200 square feet. After seeding the lawn should be rolled. Germination will be hastened if the surface is moistened with a very fine mist from the hose every day until the grass is up. When the lawn is established it should never be sprinkled, but instead soaked once a week.

Established lawns should be fed regularly. 100 lbs. Sheep Manure thoroughly mixed in 1 bale of peat should be applied as a top dressing to each 2,000 sq. ft. 3 to 4 times each summer followed by an application of 6 lbs. of bone meal per 100 sq. ft. each fall.

Your VICTORY GARDEN

15 MILLION IN 42

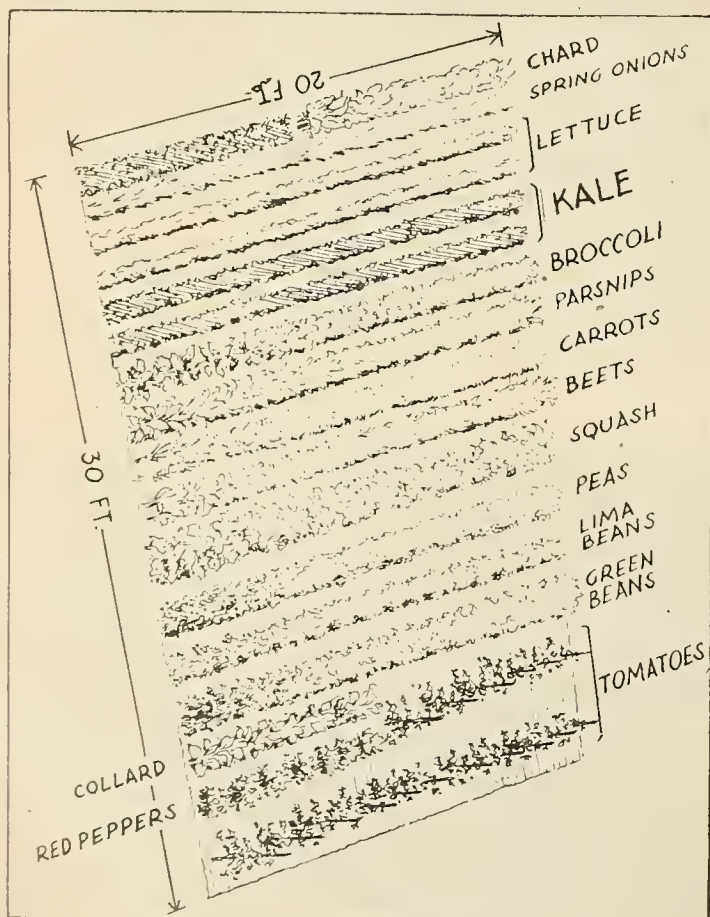

15,000,000 Victory Gardens in '42 . . . America needs 30,000,000 in '43. Just as one soldier cannot make an army or win a battle, YOUR Victory Garden will not win the war—but YOURS added to 20 to 30,000,000 other Victory gardens will release to America's war effort thousands of tons of rubber, tin and other materials, and the time and labor of thousands of sorely needed men. Your Victory Garden will also contribute valuably to your family's health.

Fortunately indeed are we in these Middle Atlantic States, where so many of the most nutritious vegetables can be grown 12 months in the year—where successive crops of many of these health giving foods will keep our tables supplied almost without interruption the year 'round.

In selecting the seeds for your garden this year you are asked by your Country to choose those vegetables that contribute most to good health—the PROTECTIVE FOODS—those richest in vitamins and minerals. In most cases these are the vegetables found in the average garden. But if there are some in the list that you do not plant regularly, be sure to include them in your garden this year. Consult the chart on the opposite page—some of the crops richest in food value are easiest to grow, hardy to summer heat and winter cold, and can be grown in a very small space. Carrot, beet, spinach, kale, mustard, broccoli and onion, to mention only a few.

If your space is plentiful plant as much as you and your family can tend. Sell and can the surplus. If your space is limited see the design printed below and plant your entire garden in Protective Foods.

Use Above List as Your Vitamin Guide . . .

We have reproduced the list above to serve as a ready reference in selecting those vegetables that pay biggest dividends in health. In some cases space is a limiting factor in the garden. Conserve space by producing the most vitamins on the space available. Even where space is not limited the shortage of time and the necessity to conserve tools and fertilizers demands that maximum results should be sought. The list represents the latest developments of science in food values. Be sure of a plentiful supply of health-giving food for your family the year round.

VEGETABLE PLANTING CALENDAR

Many otherwise successful gardeners lose months of valuable production because of a failure to realize the cold hardiness of a number of the most popular and productive vegetables.

By successive plantings beet, broccoli, cabbage, carrot, chard, kale, mustard, onion, parsley, radish, spinach and turnip (salad or root) can be kept in production, out-of-doors and without protection winter or summer, every day in the year in this isothermal zone.

The planting information shown in the chart on this page is the result of careful preparation and years of actual gardening experience. Planting dates shown for tender varieties are

based on the average U. S. Weather Bureau records of the last killing frost in the spring and the first killing frost in the fall in this zone, for the past 50 years.

Throughout our catalog we have endeavored to give the approximate number of days to maturity for all varieties. This information should be helpful, especially in determining the latest safe dates to plant tender varieties in the summer or fall, in order to make a crop before frost.

Soil conditions permitting, we recommend planting on or immediately after the average date of the last frost in the spring, otherwise spring rains may delay planting days or weeks.

"TESTED SEEDS"

The term "tested seeds" as used in this catalogue, and in all of our advertising means that every bag or package of seeds purchased at Wyatt's is supplied from a lot that has been carefully tested by the North Carolina Seed Testing Laboratory and the seeds are known to grow. Every lot of seeds reaching our warehouse is sampled and tested before the seeds are moved into our store for packaging or for sale in bulk. This accounts for the fact that "Wyatt's Tested Seeds" are more and more in demand in North Carolina and in the South.

Plant Wyatt's Tested Seeds and be sure of success.

PRICES

Prices shown on all Seeds, Bulbs, Plants, supplies and materials in this catalog are subject to change at any time. Our catalog must be compiled during the fall months at which time it is impossible to establish prices on all items accurately.

Beets are easy to grow: One ounce will sow 50 feet of drill; five to six pounds to an acre. The best soil for beets is light and enriched the year before with well rotted manure. Never use fresh manure. The soil should be thoroughly worked and the seeds drilled $\frac{1}{2}$ inch deep in rows a foot or more apart. When the seedlings have four leaves thin the plants to 4 inches apart in the row. For winter and early spring crops sow from July to October 15. For spring and summer crops sow successively as early as soil can be worked.

123 Crosby's Egyptian One of the earliest to be ready for market. The skin is smooth and dark red; foliage sparse and erect. The roots are almost round, with a small tap-root and a very small crown of leaves. The flesh of the beets is deep blood-red, with slightly lighter zonings. The head is a compact cluster of tightly closed flower buds and resembles cauliflower only in shape. When the central head is cut, numerous sprouts develop from the leaf axis, each sprout terminating in small green separate heads. These are cut in lengths of 10 to 12 inches and tied in bunches of 2 or 3 for a second crop. Served in the same way as asparagus, they form a very tasty and nourishing dish. 90 days. Prices: Pkt. 10c; $\frac{1}{2}$ oz. 25c; oz. 40c; $\frac{1}{4}$ lb. \$1.25; lb. \$4.00, postpaid.

WYATT'S CABBAGE SEEDS

Days indicated represent time from setting plants to heading

CULTURE: Plants started in a seed-bed, should not be crowded or they will run up weak and slender and will not endure transplanting well. Set the early varieties 18 inches apart in rows 2½ feet; the larger and later sorts, 2 feet apart in 3-foot rows. They need a light and well watered soil, rich in nitrogen. One ounce will produce about 1,500 plants; ½ lb. will produce sufficient plants to set an acre. Thousands of successful growers depend on Wyatt's Tested Cabbage Seed.

WYATT'S CARROTS

CULTURE: One ounce of seed for 100 feet drill, 3 to 4 pounds per acre. Health authorities assert that carrots contain in high degree those elements which constitute a nourishing article of diet. The plant has no serious insect enemies, is rarely subject to disease. The culture of carrots is easy, being practically the same as that of beets. When practicable it is best to plant them in soil that has been richly fertilized the previous season. Freshly manured soil will often produce divided roots. Plant the seed ½ inch deep in loose, well prepared soil, making rows 16 to 24 inches apart. Cultivate as soon as the plants are well established and thin to 2 to 4 inches in the row. Plantings may be made from early spring until mid-June and again in the early fall.

252 Corn Wyatt's Silver King

One pound will plant about 200 hills; 12 pounds will plant an acre

CULTURE: Plant 5 or 6 grains, 1½ inches deep, 3 feet apart in rows 3 feet apart. When plants are 4 inches high pull out all but two plants to the hill. For very early corn, the hardest and earliest varieties can be planted the latter part of March if the weather is mild, but Sweet Corn should not be planted until April, or until the Spring weather opens and the ground gets warm, as it has a tendency to rot in the ground if planted too early or during a continued cold or rainy spell of weather. It should be planted at intervals of every two weeks until August, so as to have Corn for use during the entire season.

WYATT'S FAR WESTERN GROWN CANTALOUPE

CULTURE: The Melon delights in warm rich soil with perfect drainage, and can never be grown to perfection under unfavorable conditions. Very good Melons, however, can be grown on almost any land if the trouble is taken to dig holes 2 feet square, filling them with a rich compost of woods-mold and cow-pen manure. Plant three-fourths to one inch deep from April to June in rows 6 feet apart, leaving not less than 4 feet between the hills, putting about 10 seeds to the hill. As insects are often very destructive, it is best not to thin at all until the plants are well started. When they are large enough to be safe, thin to two in a hill, and keep the ground mellow and free from weeds. Those who make a specialty of Muskmelons will find it advantageous to start the seed under protection of glass, so as to have the plants ready by the time seeds could be usually planted in the open ground.

WYATT'S PEPPERS

One Ounce of Seed Produces About 1,000 Plants

CULTURE: Sow the seed in hotbed or box at a temperature of about 70 degrees on or about February 15. Transplant to the open ground when all danger of frost is over, in rows 3 to 5 feet apart and plants set 15 to 20 inches apart in the row—about 9,000 plants are required to set an acre. Cultivate frequently and keep free from weeds. A mixture of sheep manure and chicken manure is most desirable for distributing in the rows a week or ten days before the plants are set out. When the plants are well set and started at about 7 inches high, guano or any well-rotted manure hoed into the surface soil will also increase plant growth and fruiting qualities.

1913 Petunia, Glamour

1936 Petunia, Topaz Rose

1913 Petunia Glamour —Honorable Mention

A.A.S. 1942. Truly one of the loveliest Petunias we have ever grown. The flowers range from 4 to 5 inches across; they are artistically waved and ruffled, and the color is a beautiful salmon rose with golden veining on the white throat. Brilliant in the garden and glorious under artificial light. It is continuously in bloom and is the object of much admiration wherever grown. The plant attains a height of from 15 to 18 inches. Pkt. 25c; 3 pkts. 60c.

1936 Petunia, Topaz Rose

Topaz Rose has been a strong favorite with all gardeners ever since its introduction. It is one of the most vividly colored of the rose petunias: extremely free bloomer, providing a brilliant bed of color through the season. Pkt. 10c; 3 pkts. 25c.

1013 Ageratum, Midget Blue

The little plants grow 2 to 3 inches high and they are practically covered with true blue flowers. This is really the first dwarf Ageratum that we have found that will come uniformly dwarf and true to color from seed. This dainty little plant won a silver medal in 1939 All-American Trials. Pkt. 15c; 2 pkts. 25c.

1776 Marigold, Pot O'Gold

1692 Hollyhock, Indian Spring

Indian Spring is one of the loveliest summer annuals. It blooms in less than five months. This species has a colorful display of semi-double to double fringed flowers for several weeks during the summer. While pink predominates, variations will occur from a light pink to an almost crimson rose shade. Pkt. 10c; 3 pkts. 25c.

1807 Morning Glory, Cornell

These brightly colored carnelian red, white bordered trumpet shaped flowers are an

excellent foil for Clark's Heavenly Blue Ipomea. Cornell is an early bloomer and its blossoms remain open well past mid-day. Pkt. 15c; 2 pkts. 25c.

2198 Zinnias, Super Crown O'Gold Pastel Tints

The flowers are large and showy, combining the ruggedness of the Dahlia Flowered with the soft effect of the California Giants. It is strictly a mixture of pastel tints containing a wide range of pastel shades. Delightfully soft, yet colorful for garden decoration, it is unexcelled for cutting. The plants are strong and robust and the flowers are borne profusely through the season. Pkt. 10c; 1/2 oz. 50c.

2110 Helianthus, Sun Gold

Sunflowers are by no means new in the horticultural world, but surprisingly unknown to a great many garden enthusiasts. This fine new strain of double Sunflowers are one hundred per cent double. These brilliant golden yellow flowers which measure 4 to 5 inches in diameter are a delight in a background planting in full sun where they will produce a vivid splash of color in mid-summer. The plants reach a height of 4 to 5 feet, depending on soil and climate, are very even in growth and are unusually free flowering. Pkt. 10c; 1/4 oz. 25c.

2162 Verbena, Hybrida Grandiflora

Brightness This variety is a particularly vivid color, a bright rosy, cerise-scarlet boldly contrasted with the large white eye. The florets are about 7/8 inches in diameter. The plants are semi-compact in habit, making an excellent variety for border or edging use. Pkt. 10c; 1/8 oz. 50c.

1524 Cynoglossum, Firmament

Firmament has typical Forget-Me-Not flowers of a rich blue color; is an easy to grow, hardy annual. Its habit is bushy and it grows to a height of 18 inches. Pkt. 10c; 1/8 oz. 35c.

1776 Marigold Dwarf Gigantea Pot O'Gold

Pot O'Gold produces a mass of intense dazzling gold flowers on dwarf compact plants. The plants are 12 to 15 inches tall and are first among large flowered Marigolds to bloom. 1935 Petunia, Hollywood Star

This is an early flowering, strong, vigorous plant producing a profusion of golden-throated, rich rose flowers throughout the summer months. 1845 Nierembergia Hippomanica

Nierembergia starts flowering when the plants are only two inches tall, that is about 15 weeks after the seed is sown, and keeps flowering until the heavy frost in late fall. The foliage is light gray green, very inconspicuous, and there are literally hundreds of flowers in bloom at a time throughout the summer. It is a half hardy perennial which will winter over if given some protection. The plants should be cut back at the end of the season and they will send out fresh growth in the early spring. Pkt. 25c.

2046 Scabiosa, Blue Moon

A strikingly beautiful Scabiosa, as different from the existent Scabiosa varieties as Double Nasturtiums are different from the old single type. BLUE MOON produces large, fluffy, double flowers composed entirely of broad, heavy, wavy petals. Because of this complete doubleness the flowers are extremely large. The color is deep rich lavender blue. The plants grow 3 to 4 feet. BLUE MOON received Honorable Mention in the 1939 All-America Selections. Pkt. 10c; 3 pkts. 25c.

HOLLYHOCKS—PINKS

HARDY ANNUAL PINKS

The hardy annual *Dianthus*, or Pinks, as they are more popularly known, deserve more attention by southern gardeners. The plants are rugged and dependable, being almost sure to grow and bloom in almost any situation. They prefer a well drained situation where the sun reaches them most of the day. Pinks bloom continuously over a long period producing a bright display in the garden and are excellent cut flowers with their delicate spicy fragrance.

Ⓐ 1555 *Dianthus Splendens* Single

A most worthy garden subject. Large single red flowers with a wide white eye, this thrifty member of the famous old family of garden "Pinks" combines beauty, fragrance and ruggedness. Indian Spring is one of the loveliest summer annuals. It blooms in less than five months. This species has a colorful display of semidouble to double fringed flowers for several weeks during the summer. While pink predominates, variations will occur from a light pink to an almost crimson rose shade. Pkt. 10c; 3 pkts. 25c.

HELIOTROPE

1677 MIXED. Always popular on account of its delightful fragrance. The seed is rather slow in starting and had best be sown in boxes or in a hotbed. While it is a perennial, it will not stand any frost, and it is therefore started afresh each year unless one cares to remove the plants to the house before frost comes. Pkt. 10c; ½ oz. 35c.

HELICHRYSUM

1749 *Lupin Russell's* This outstanding novelty of 1939 comes to us from England where for many years an obscure Yorkshire gardener has been carefully selecting and improving this strain until at last it is ready for thousands of anxious and impatient enthusiasts. The plants grow 3 to 5 feet high with numerous flower spikes measuring 15 to 30 inches in length. Pkt. 10c. 1750 GIANT KING MIXED. 1749 Russell's Lupins

1809 Morning Glory, Heavenly Blue

MORNING GLORIES

IPOMEAS. In growing Ipomeas (Morning Glories and Moonflowers), never plant until the soil is thoroughly warm. To aid germination of particularly hard-seeded varieties, filing a small notch at the top of the seed will help considerably. Always select the driest, sandiest part of the garden and sow where the plants are to flower as the Ipomeas resent transplanting. Plants should be kept on the dry side in order to induce early and abundant flowering with a rather sparse growth of foliage. Heavy watering will stimulate foliage growth at the expense of flowers. A poor soil is preferable to a rich one and fertilizer should not be used as this will promote heavy foliage which will hide the flowers.

1805 Pearly Gates It is exceptionally free flowering with large fleecy pure white flowers making a heavy cascade of flowers on fence or trellis. One of the earliest bloomers. Pearly Gates received Special Mention in the 1942 ALL-AMERICA Selections. Pkt. 15c; 2 pkts. 25c.

1807 Cornell These brightly colored carnelian red, white bordered trumpet-shaped flowers are an excellent foil for Clark's Heavenly Blue Ipomea. Cornell is an early bloomer and its blossoms remain open well past mid day. Pkt. 15c; 2 pkts. 25c.

1808 Scarlett O'Hara This introduction brings us an entirely new color in this popular garden flower, rich dark wine red or deep rosy crimson. While the flowers are not quite so large as the Heavenly Blue Morning Glories they are of good size, 3 to 4 inches in diameter freely produced on fast growing vines that bloom 65 to 70 days after seeds are sown. The dark green foliage does not make a heavy growth, leaving the plants graceful in appearance. Easiest culture. Pkt. 15c; 2 pkts. 25c.

1809 HEAVENLY BLUE. A graceful vine of extremely quick growth producing a great number of exquisitely formed deep clear blue petunia-like flowers. Ideal for covering stumps or other unsightly objects. Pkt. 10c; ¼ oz. 35c; oz. \$1.00.

PETUNIAS

Sow the small seeds in a warm, sunny, open place outdoors, thinning to 15 inches apart, or in frames for transplanting. Scatter seeds thinly, barely cover and firm soil over them; water seedlings with a fine spray to prevent drying out. The weakest looking seedlings usually produce the finest flowers, so save the weak plants for transplanting. Seed of the double and fringed sorts should be pressed into a shallow pot of sifted soil and covered with only a sprinkling of sand. The pot should be watered from below by placing it in water. Never allow to become too dry nor too moist.

(1938 Silver Medal winner in the All-America selections.) A new petunia of considerable importance to amateur gardeners and commercial growers alike. SALMON SUPREME brings a new and lively color into an already richly endowed family of plants. The flowers are a light salmon, 1½ to 2 inches across produced in abundance on a neat compact plant 10 to 12 inches tall, over an unusually long season. Pkt. 25c.

1902 Flaming Velvet
Gold Medal award A.A.S. 1936. Outstanding for color, type, and uniformity. Flowers are velvety blood red and borne in profusion slightly spreading plants. Pkt. 10c; 3 pkts. 25c.

1935 Petunia, Hollywood Star
This is an early flowering, strong, vigorous plant producing a profusion of golden-throated, rich rose flowers throughout the summer months. The five pointed star-like formation of all petunia blooms is greatly exaggerated in this variety, the points being drawn out to a fine delicate tip. Pkt. 25c; 2 pkts. 45c.

1936 Petunia, Topaz Rose
Topaz Rose has been a strong favorite with all gardeners ever since its introduction. It is one of the most vividly colored of the rose petunias; extremely free bloomer, providing a brilliant bed of color through the season. Pkt. 10c; 3 pkts. 25c.

1909 Burgundy
Burgundy is one of those rugged individualists of the garden, a strong growing type, with very showy flowers in a shade of deep red which is rather difficult to combine with other colors. Since, however, its own color is so showy in itself, it is well worth growing as an accent or specimen group. Pkt. 25c; 2 pkts. 40c.

1907 Wyatt's Dainty Lady
(See Illustration.) An exquisitely fringed graceful flower that introduces an entirely new color in Petunias. Dainty Lady is a delicate golden yellow. To perfect this

lovely flower has required 10 years of careful hybridization and selection. Besides being an All-America selection, Dainty Lady has also won an Award of Merit by the Royal Horticultural Society of England. Pkt. 25c.

1903 Rose Gem
A bright addition to the group of miniature petunias, recently introduced. The color is the same deep rich rose that has made Petunia, Rose of Heaven so popular. The plant is dwarf, neat and compact, 5 to 6 inches high, and covered with the miniature flowers. Rose Gem received the Award of Merit in the All-America Selection of 1936. Pkt. 25c.

1920 GIANT Fringed Mixed

Large finely fringed flowers delicately fragrant and in many attractive colors borne in profusion on compact plants. Ideal for specimen plants in pots or boxes or for bedding out of doors. 1 foot. Pkt. 25c; 3 for 65c.

1911 Martha Washington
Silver Medal winner in the 1935 All-America selections. While this excellent petunia is not so recent as some, it is deserving of prominent space in every garden. Its growth is only 8 to 10 inches high, the plants producing a ball effect. The very large flowers are ruffled or frilled. The unusual coloring includes blush pink at the frilled edge, changing through orchid to wine red toward the center and into dark violet at the throat. Pkt. 25c.

1930 GIANT DOUBLE FRINGED MIXED. Seeds are very expensive. Produce about 80 per cent double flowers. Pkt. 50c; 2 pkts. 85c; 1-64 oz. \$7.50.

2046 Scabiosa, Blue Moon

SCABIOSA

While the annual Scabiosas will bloom during the summer, they do so much better in the early spring than during the hot summer days, that every effort should be made to start the seed in the early fall in warm sections or in cold frames in early spring in the more northerly sections. In warm sections, such as Southern California, plants will winter over perfectly well and produce extremely early flowers the second year. Scabiosas enjoy full sun and will thrive in any good garden soil.

2046 Blue Moon A strikingly beautiful Scabiosa, as different from the existent Scabiosa varieties as Double Nasturtiums are different from the old single type. BLUE MOON produces large, fluffy, double flowers composed entirely of broad, heavy, wavy petals. Because of this complete doubleness the flowers are extremely large. The color is deep rich lavender blue. The plants grow 3 to 4 feet. BLUE MOON received Honorable Mention in the 1939 All-America Selections. Pkt. 10c; 3 pkts. 25c.

Well rotted (but no other) compost or a liberal sprinkling of Bone Meal might be added when the bed is prepared and when the peas are growing slight applications of Sheep Manure at 4- to 6-week intervals should be made.

The medium sized well rounded, quilled, shaggy flowers lend themselves admirably to flower arrangement and are yet large enough to satisfy the desire for a mass of color. Pkt. 10c; 1/8 oz. 35c; oz. \$2.25.

2245 WILDFIRE. The fantasy type of Zinnia with its friendly informality is certainly maintaining its place as a reigning favorite in the Zinnia family. WILDFIRE adds a distinct note of cheerfulness to the garden and will enliven any home when used in flower arrangements. The plants are neat in habit, strong growing and very free blooming, 2 1/2 to 3 ft. in height and come into flower 45 to 50 days after the seeds are sown. In growing this or any other zinnia we strongly recommend sowing the seeds where the plants are to bloom if it is at all possible. WILDFIRE is a rich dazzling scarlet, a truly beautiful flower possessing a color and texture rarely found except in zinnias. Pkt. 10c; 3 pkts. 25c.

2249 ORANGE LADY. A worthy companion to the other members of this fine group. Orange Lady adds a rich shade of deep bright orange. Otherwise this variety has the same qualities, plant and flower size and gay informality that is typical of the Fantasy group. Pkt. 10c; 3 pkts. 25c.

2245 Zinnia Fantasy Wildfire

BRIEF CULTURAL NOTES

ZINNIAS: Zinnias are warm weather loving plants and should never be sown until the soil has thoroughly warmed up and all danger of any frost has passed. For best results, especially with the smaller flowered, early blooming varieties, we recommend sowing the seed where the plants are to flower. The taller growing, large flowered sorts can safely be transplanted, although they also will make a more robust growth and will produce more flowers if they can be sown where the plants are to bloom, and then when the seedlings are 3" or 4" tall, thinned to the proper distance. To induce a thrifty, heavy root system, irrigate your plants rather than sprinkling. Dig a little trench alongside the row and let the water run slowly for several hours so it will seep down deep into the ground and make the food in the soil available for the plant throughout the mass of feeding roots. Always cultivate after each irrigation to conserve moisture. By this method you will have to water Zinnias only once every two weeks or so, whereas if the ground is merely sprinkled, you will have to repeat the sprinkling every other day or so. Irrigation not only gives a stronger, healthier plant, but also saves on your water bill.

Grow Your Own Perennials
From Seeds

Everybody wants Perennials — and wants them in generous measure to secure the desired effects in color and charm. If you delay and finally buy plants, the cost mounts high; an attractive perennial border may require several hundred dollars worth of plants. Exactly the same results can be secured with \$3.00 or \$4.00 worth of seeds! Aside from the money saved it is very fascinating to grow your own plants from seed.

WYATT'S GLADIOLUS FOR 1943

Thirty-four Unrivalled Large-flowering Varieties

CULTURE

"Glads" are the most popular and easily grown of all summer-flowering corms (not true bulbs).

Soil requirements are not very exacting. Plant large corms 6" or more apart 4" to 6" deep, smaller ones accordingly, being governed by whether the soil is light or heavy. Plantings made at intervals of two to three weeks beginning in early April and continued until early July should flower from the latter part of June until frost. Good fertilizers include cow and sheep manures. Apply two to three times as a side dressing during the growing season before flowering. Fertilizers should not come in contact with corms or foliage. Watering during dry seasons will give amazing results.

Our stock is Michigan grown, disease and thrip free. Unless otherwise stated all corms are number 1—(1½" up). All are flowering size.

Early—70-80 days. Midseason—85-90 days. Late—100 days or more.

CLOVERS

F78 Alyce Clover U. S. Department of Agriculture: "Alyce Clover, like soybeans and lespedeza, was introduced from Southern Asia (in 1910), and seems well adapted to the South. Has made a good growth in Louisiana, Mississippi, Texas, Georgia, and Florida. It makes excellent hay, pasture and cover crops. A low spreading, branched, leafy plant, 3 feet tall in thick stands. Cattle are fond of it both green and dry. It is a summer annual, maturing seed in October, and volunteers a good stand the following year. When cut early for hay a second growth will produce a seed crop, 350 to 600 lbs. per acre. Cut hay in early bloom. Rake as soon as drying permits. Dries readily and can be baled the day following harvest. Prefers sandy loams, but has done well on all better grades of general farming lands except very light or wet. Use 200 to 400 lbs. of superphosphate on poor soils. Not sensitive to lime. Plant from spring to July, May or June preferred. Broadcast 10 lbs. of hulled seed per acre on well prepared ground and cover lightly. It is not seriously damaged by any disease or insect." Prices: Lb. 35c; 5 lbs. 65c, postpaid. Not prepaid, 10 lbs. \$2.25; 25 lbs. \$5.25; 100 lbs. or more at 20c lb.

F97 Alfalfa, Kansas Grown We offer nothing but the very finest grade of genuine Kansas Grown Alfalfa and our seed is usually 99 per cent or better pure Alfalfa. The hay is remarkably palatable and the feeding value worth nearly twice that of the very best Timothy. Droughts have no effect upon Alfalfa, as its roots penetrate to astonishing depths. Alfalfa can be sown in either fall or spring. The cleaner the ground the better the stand will be. Sow on deep, well drained, good loamy land. Alfalfa will not grow on acid soils, and to correct this condition spread 1 to 1½ tons of finely ground lime to the acre after plowing and a few weeks before sowing. Cutting should be done always as blooming begins. Sow 40 lbs. to the acre. Prices: Lb. 60c; 5 lbs. \$2.50, postpaid. Not prepaid, 10 lbs. \$4.75; 25 lbs. \$11.50; 100 lbs. or more at 44c lb.

F86 Alsike Clover One of the best for mixing with timothy; it is perfectly hardy in every climate. Sow early in the spring or late summer. Sow 10 to 15 lbs. per acre alone, or 8 lbs. per acre with timothy. Prices: Lb. 50c; 5 lbs. \$2.05, postpaid. Not prepaid, 10 lbs. \$3.60; 25 lbs. \$8.75; 100 lbs. or more at 34c lb.

F85 Burr Clover Is an annual winter legume, coming from seed each year, and furnishes grazing during the winter. If allowed to go to seed, it will reseed the ground for another winter's grazing. Sow Burr clover at the rate of 20 to 25 lbs. of hulled, re-cleaned seed to the acre broadcast, or if sown in the burr 60 to 80 lbs. per acre. Prices: Lb. 50c; 5 lbs. \$2.00, postpaid. Not prepaid, 10 lbs. \$3.50; 25 lbs. \$8.50; 100 lbs. or more at 33c lb.

F83 Crimson Clover Should be sown from August to October. When sown by itself, 25 to 30 pounds are required to the acre; sown with grain or vetches, 15 pounds would be sufficient. Prices: Lb. 35c; 5 lbs. \$1.50, postpaid. Write for quantity prices.

AND FIELD PROVED

F82 Red Clover 99½ per cent pure, dodder free. A valuable farm crop in northern part of the Cotton Belt. Equally good for pasture, hay or soil improvement. Even the first crop makes rich feed and is most valuable for hay. Sow in fall or spring. September and March being the best months. 15 lbs. per acre. Prices: Lb. 50c; 5 lbs. \$2.05, postpaid. Not prepaid, 10 lbs. \$3.60; 25 lbs. \$8.75; 100 lbs. or more at 34c lb.

F87 White Blossom Sweet Clover Adapted to a wide variety of soils; is used for pasture, for forage, for ensilage, for bees, for soil improvement. The deep roots break up, aerate and drain stiff subsoils and add humus. Spring sowings will yield a crop the following fall and two crops the following year. The first season it grows 1½ to 2½ feet high, but if cut when 6 inches high it stools out and makes a more tender growth for grazing. Sow 20 pounds per acre. Prices: Lb. 35c; 5 lbs. \$1.15, postpaid. Not prepaid, 10 lbs. \$1.80; 25 lbs. \$4.25; 100 lbs. or more at 16c lb.

F80 White Dutch Clover Because of its spreading habit and persistent year 'round growth White Dutch is invaluable for lawn and pasture use. It grows in all soils and will grow both in the shade and open areas. Like other clovers White Dutch enriches the soil while furnishing nutritious grazing. Sow 6 to 8 pounds per acre alone or 2 to 3 pounds with other clovers or grasses. Prices: Lb. 95c; 5 lbs. \$4.25, postpaid. Not prepaid, 10 lbs. \$7.80; 25 lbs. \$19.00; 100 lbs. or more at 75c lb.

F95 Lespedeza, Sericea Scarified and re-cleaned. This is the perennial lespedeza being grown so largely over the south. Its greatest asset is that it grows on the poorest soils without fertilizer or lime and while it steadily improves the land, it produces an abundance of nutritious hay if cut when tender. Prices: Lb. 40c; 5 lbs. \$1.50, postpaid. Not prepaid, 10 lbs. \$2.50; 25 lbs. \$6.00; 100 lbs. or more at 22½c lb.

F93 Kobe Lespedeza (Dodder Free) A variety particularly adapted to lowlands. Kobe is only about 10 days later than Common. The leaves and stems are slightly coarser making a heavier hay crop. This variety is being highly recommended by the N. C. Experiment Stations for all but the mountainous regions of North Carolina, South Carolina and Virginia. Sow 30 to 40 lbs. per acre. Prices (Dodder Free): 100 lb. bags 15c lb.; 5 bags or more at 14c lb. Prices (N. C. Grade No. 1 Kobe): 100 lb. bags 13c lb.; 5 bags or more at 12½c lb.

F92 Korean Lespedeza Korean Lespedeza will grow on any soil, wet or dry, rich or poor, sour or sweet, and has never been killed by a drought. Unexcelled for hay crop since it will produce from 2 to 4 tons of good hay per acre on a good thick even stand. It is equal to alfalfa in feeding value, and compares favorably in fineness, palatability and protein content. A good stand will make one ton of hay per acre for each 4 to 5 inches above cutter bar. The hay is easier to cure and handle than soy beans, red clover, or alfalfa. When cutting for hay cut in August or early September. If hay crop is to reseed the land, hay must be either early and high enough for stubble to make sufficient growth to produce seed; or wait until seed have formed on bottom branches, which seed shatters to the ground for reseeding. Korean Lespedeza is earlier than other lespedezas, this insures harvest before fall rains and early frost and gives time for seed bed preparation for small grain that fall. If a good stand is expected the first year sow from 25 to 30 pounds of seed per acre. Prices: 100 lb. bags \$11.00; 5 bags or more at 10c lb.

F91 Common Lespedeza

It grows on galled hillsides and on all soils, even on the poorest, and being a legume for later crops. Its abundant long taproots and laterals when decayed, open up the subsoil and leave in it great quantities of nitrogenous matter. Once started it soon spreads and takes possession. Sown on old pastures, it will add very materially to the value of the pasture. Sow 25 to 30 lbs. per acre. Prices: Lb. 45c; 5 lbs. \$1.85, postpaid. Not prepaid, 10 lbs. \$3.00; 25 lbs. \$7.25; 100 lbs. or more at 28c lb.

CROTALARIA - SOY BEANS - COW PEAS - VELVET BEANS

F304 Crotalaria Giant Striata

The above pictured crop of Wyatt's Giant Striata Crotalaria, grown on the farm of Mr. J. L. Long, Garner, Wake County, N. C., was planted to smother out wire grass. This is the first crop of Crotalaria that has been on this land and it averaged 5½ ft. tall producing approximately 35 tons green manure per acre; the equivalent of 700 pounds of soda, without taking into consideration the tremendous value of the humus. Crotalaria is one of the cheapest crops to seed and can be seeded over small grain crops when they are top dressed in the spring, following with light cultivation or broadcast in corn when laid-by. This legume is the greatest soil building crop because of its tonnage.

CROTALARIA

F304 GIANT STRIATA. The highest yielding Crotalaria adapted to all soils and making a tremendous tonnage of green manure on the poorest dry or wet land. Only 8 to 10 pounds of seeds are required per acre and may be sown in small grains at the time soda is applied if seeding is followed with harrow or weeder. Very deep rooting. Prices: Lb. 35c; 5 lbs. \$1.25, postpaid. Not prepaid, 10 lbs. \$2.00; 25 lbs. \$4.75; 100 lbs. or more at 18½c lb.

F301 LATE SPECTABILIS. The great new cover crop for turning under. Requires no fertilization, no liming, and may be grown without cultivation. Broadcasting may be done just before the last cultivation of cotton or corn, allowing a main crop and building up your soil all in the same season. For maximum growth, however, broadcast 15 to 20 lbs. per acre on well prepared land when frost danger is past, harrowing in not over 2 inches. Prices: Lb. 35c; 5 lbs. \$1.25, postpaid. Not prepaid, 10 lbs. \$2.00; 25 lbs. \$4.75; 100 lbs. or more at 18½c lb.

F303 CAROLINA SPECTABILIS. An early maturing strain of the Spectabilis variety. This strain will mature seeds in the upper South, but does not make the growth that the late strain makes. Prices: Lb. 35c; 5 lbs. \$1.25, postpaid. Not prepaid, 10 lbs. \$2.00; 25 lbs. \$4.75; 100 lbs. or more at 18½c lb.

SOY BEANS

CULTURE: Soy beans may be planted either broadcast or in drills. They grow equally well on light and heavy soils, but on heavy soils they should not be planted more than 1 to 1½ inches deep except in dry seasons. On light sandy soils plant deeper, but not more than 3 inches. Plant in April, May or June. Such large seeded varieties as Mammoth Yellow require 1 bushel or more per acre, whereas Laredo small seeded kind only require 1 peck to the acre.

F153 Clemson A recent introduction of much promise. In yield of beans the Clemson ranks with the best while at the same time it is a hay type plant rivaling the famous Ootootan in production and quality of hay. The oil content is high and the beans are readily accepted on the oil market. Write for prices.

F151 Virginia It is about twenty days earlier than Mammoth Yellow. The vines make a fine growth, are filled with pods, stand about three feet high, are easy to cut and easy to cure. Write for prices.

F144 Tar Heel Black About ten days earlier than Mammoth Yellow and makes almost as tall a growth. Write for prices.

F140 Mammoth Yellow

A strong upright growing plant producing a heavy crop of beans. This variety is suitable for sowing thick for hay, or planting alone or with corn for grazing. One of the best varieties for bean production and the beans are readily accepted at the crushing mills. Late maturing. Write for prices.

F150 Haberlandt Matures about three weeks earlier than the Mammoth Yellow, is a heavier yielder of beans and an excellent pasture variety. Write for prices.

F147 Tokio A heavy producer of extra-large pods and beans. It is a superior oil bean and for hogging down. Write for prices.

F142 Ootootan Its late maturity is more than overcome by the abundant growth—five feet and more in long seasons—its fine stems and abundant foliage, and the fine texture of its hay. 1 peck to acre. Write for prices.

F143 Biloxi An upright variety, growing four to five feet high. A heavy yielder of beans; a fine bean for hogging down, for planting with corn or sorghum. The pods are less liable to pop than most varieties. Late in maturing. 1 bushel per acre. Write for prices.

F152 Laredo A bean of outstanding worth, particularly for making hay. In a six-year test it averaged 1½ tons to the acre. It is medium in maturity, is a good yielder of beans. 1 peck per acre. Write for prices.

F153 Manchu The earliest of all, ready in 100 days. It is grown in the northern and western states but has been found good for the Carolinas. It is a heavy yielder of beans and makes excellent hay and forage. Write for prices.

STOCK PEAS

CULTURE: Cowpeas can be planted in May, June or July, at the rate from 1 to 1½ bushels per acre.

F194 Sugar Drip Cane No new sorghum has been brought out that can compare with it in yield of syrup. It makes a large, juicy and succulent growth. It will yield about 65 per cent of the weight of the cane in juice when extracted by a good farm mill; a stronger mill should extract as much as 75 to 80 per cent. Seed thickly, not less than 50 lbs. to the acre, any time from the middle of April until the end of July. It's a quick crop, maturing in six to eight weeks. Cut while in bloom, before the seed hardens in the head. Growing millet with an early variety of cowpeas, like Whippoorwill, is becoming quite popular, 40 lbs. of millet being sown with a bushel of cowpeas. The crop should be cut when the millet is coming into bloom, regardless of the maturity of the cowpeas, for at that stage the feeding value of the millet hay is the highest. Prices: Lb. 25c; 5 lbs. 75c, postpaid. Not prepaid, 10 lbs. 90c; 25 lbs. \$2.00; 100 lbs. or more at 7c lb.

F186 Pearl, or Cat-Tail Millet One of the best and most nutritious of the continuous cutting green forage plants. Grows 10 to 12 feet high, but cutting can commence when it has attained the height of 3 to 4 feet, when it will stool out enormously and make rapid growth; can be cut in this way three to four times during the season. It does well even on poor land, and surprisingly well in dry seasons. All kinds of stock eat it greedily. Should not be planted until the ground is thoroughly warmed. Sow 6 to 8 lbs. to the acre in rows 3 feet apart. Prices: Lb. 35c; 2 lbs. 60c; 5 lbs. \$1.15, postpaid. Not prepaid, 10 lbs. \$1.80; 25 lbs. \$4.25; 100 lbs. or more at 16c lb.

When green, feed a moderate quantity at first, gradually increasing the quantity as the animals become accustomed to it. Prices: Lb. 25c; 5 lbs. 75c, postpaid. Not prepaid, 10 lbs. 90c; 25 lbs. \$2.00; 100 lbs. or more at 7c lb.

Early plantings can be cut in time to put the same land in corn, peanuts, cowpeas, millet or other summer crops. Prices: Peck 35c; 32 lbs. (bu.) \$1.15; 5 bu. bag \$5.00; 5 bags or more at 98c bu.

F225 Peanut Virginia Bunch

F224 Peanut Improved Spanish

F221 Peanut Valencia

PEANUTS

CULTURE. Soils: Well drained sandy loam, properly limed, is best. Varieties: Virginia Bunch and Jumbo Runners in the old belt of North Carolina and Virginia. Spanish, North Carolina Runner or Virginia Bunch in the Southern Coastal Plains and counties bordering the Piedmont, using Spanish, Tennessee Red, or North Carolina Runner if in doubt as to the ability of the soil to make the larger varieties. In the Piedmont the Spanish variety is recommended. Smaller varieties produce more oil per ton of nuts, however, on adapted soils the larger nuts produce more oil per acre. Use 35 lbs. small varieties; 45 lbs. large varieties (shelled) per acre. Buy 1/3 more nuts by weight in the shell for the desired amount of shelled nuts. Average of 22 tests conducted in North Carolina in 1941 showed \$16.43 per acre increase return where peanuts were dusted 4 times with sulphur-copper dust, after deducting the cost of dusting.

F222 North Carolina Runner Yield 800 to 1,200 lbs. in shells per acre, very high in oil content and a good variety for hogging. Pods slightly larger than Spanish, red skinned and good quality. Prices: 10 lbs. \$1.90; 25 lbs. \$4.50; 100 lbs. or more at 17c lb.

F223 Tennessee Red Yield about the same as North Carolina Runner. Nuts larger, pods well filled with 3 or 4 kernels of excellent quality. Prices: 10 lbs. \$1.90; 25 lbs. \$4.50; 100 lbs. or more at 17c lb.

F224 Improved Spanish Yields 1,000 to 1,200 pounds per acre in shells. This is the earliest of all peanuts, a bunch type, producing pods tightly filled with 2 kernels each. Highest in oil content and most dependable for varied soils. Strong roots attach nuts to plants and prevent loss in harvesting. Plant 6 inches apart in 18 inch rows for highest yields. Prices: 10 lbs. \$1.90; 25 lbs. \$4.50; 100 lbs. or more at 17c lb.

F221 Valencia Yields 600 to 700 pounds in shells. Adapted to a variety of soils and makes few "pops." Straight smooth pods contain 3 or 4 large kernels of finest quality. An early bunch variety. Prices: 10 lbs. \$1.90; 25 lbs. \$4.50; 100 lbs. or more at 17c lb.

F225 Virginia Bunch Yields 1,500 to 2,500 pounds in shells. Produces largest nuts of bunch type and highest yielding of all varieties since it can be planted closer in rows and in narrow rows. Prices: 10 lbs. \$1.90; 25 lbs. \$4.50; 100 lbs or more at 17c lb.

You can use it in very narrow rows—as close as 9 inches. You can use it in 42 to 48-inch rows by closing off the flow in three spouts and distributing through the other three—either on the right or left hand side.

The No. 220 spreads fertilizer from 4 to 30 inches on the ground. The hopper capacity is one bushel and the weight of the load is placed over the wheel, making it easy to push. The No. 220 will distribute 100 to 2,000 pounds of commercial fertilizer to the acre. Quantity per acre is regulated by a notched index on the right hand handle. The shut-off rod is operated from the same point.

Weight 70 lbs.
Price, \$15.50

These Planet Jr. Horse Hoes and Cultivators are stronger, better made and finished than any other one-horse cultivators, and enable you to increase your yield, because they do a greater variety of work in corn, potatoes, cotton, beans, tobacco and other crops requiring similar cultivation, and do it more thoroughly. Cultivate deep or shallow, in different width rows, and the extra long frames make them steady running. All Planet Jr. cultivator steels are made of beveled steel thickest down the center, making them self-sharpening, and the points retain their shape and strength. No. 9 has lever expander, allowing quick adjustment for different width rows. Used with or without a wheel.

NO. 9-D. Without wheel. Price, \$13.75.

OLIVER TRACTOR DISC HARROW in 20-disc size is made for use with the small size tractor. It is controlled by the operator of the tractor and in this way requires only one man to operate both tractor and harrow. OLIVER STALK CUTTER

OLIVER STALK CUTTER is steel built throughout with heavy angle steel frame and equipped with latest type steel wheel with dust-proof boxing, which makes it one of the strongest and most durable machines on the market, one that has had a thorough test under the most exacting conditions, thereby proving its worth.

Oliver 8 Foot, 24 Tooth Rake

OLIVER SELF DUMP RAKE

THE OLIVER SELF DUMP RAKE is built with a strong rigid frame of hot riveted angle steel. A heavy truss rod runs the entire length of the frame and supports the center of the rake. It is a bridge trussed frame that is built to prevent sagging or twisting.

The rake teeth are lifted, and the hay dumped, by a pair of strong lift rods operating from each wheel. The ends of the lift rods are shaped into pawls to fit into the ratchets in the wheel hubs. The large number of ratchet teeth in the wheel hubs cause the rake to dump, the instant pressure is applied to the foot dump pedal. The rake teeth drop to the ground immediately, without leaving an un-raked strip next to the windrow.

The teeth are made of heat treated high carbon spring steel. They are strong, but have sufficient springiness to prevent breakage when they encounter an obstruction.

The wheels are unusually strong. The concave tires are 1 3/4 inches wide and 54 inches in diameter.

Oliver 9 Blade Stalk Cutter

OLIVER MOWER

THE OLIVER MOWER is a fast-cutting, long-lasting machine, in which every part does its share.

The Oliver Mower Frame is strongly built and braced with a solid cross member to the pitman drive end, and braced back again to the tongue. This Big Frame holds the driving parts in rigid alignment and provides the solid base that allows the cutter bar the flexibility it needs, while holding it to its straight cutting line. The Oliver Frame is big, sturdy and solid. It will last and do its work, for many years to come.

In the big frame the full length solid axle runs in long roller bearings, spaced far apart, to give the lightest bearing load, which aids in securing the easiest draft.

All gear teeth of the spur gears, and also the bevel gears are correctly designed to mesh and secure the greatest power with the least loss to play and friction.

The clutch is of the four-jaw dog type, wide on its faces to keep down wear, positive and sure in action. It is controlled by a two pad, double acting foot lever that throws it quickly, either in or out.

No mower has any higher cutter bar speed than the Oliver—many are slower. This higher speed is very essential in cutting wild hay and especially so when mowing roadsides.
